

Claims

1. A lubricating oil composition, comprising:
- (A) a base oil;
- 5 (B) a molybdenum and sulfur containing composition derived from a basic nitrogen containing compound, a molybdenum compound and carbon disulfide;
- (C) a boron-containing compound selected from the group consisting of:
- (C-I) a borated ester represented by one or more of the formulae

(C-I-1)

(C-I-2)

(C-I-3)

wherein in formulae (C-I-1), (C-I-2) and (C-I-3), each R is independently a hydrocarbon group and any two adjacent R groups may together form a cyclic group;

20 (C-II) at least one borated epoxide comprising the product made by reacting a boron reactant with one or more epoxides represented by the formula

wherein in formula (C-II-1) each R is independently hydrogen or a hydrocarbon group and any two adjacent R groups may together form a cyclic group, with the proviso that when a single epoxide is used the total number of carbon atoms in the R groups does not exceed about 12, and when a mixture of epoxides is used the

average on a mole basis for the total number of carbon atoms in the R groups for the mixture does not exceed about 12; and

(C-III) mixture of (C-I) and (C-II); and

(D) optionally a phosphorus containing compound, provided the phosphorus content of the lubricating oil composition does not exceed about 0.10% by weight.

2. The composition of claim 1 wherein the basic nitrogen containing compound is reacted with the molybdenum compound to form a molybdenum containing intermediate, and the molybdenum containing intermediate is reacted with carbon disulfide to form the molybdenum and sulfur containing composition.

3. The composition of claim 1 wherein the basic nitrogen containing compound is reacted with the carbon disulfide to form a sulfur containing intermediate, and then the sulfur containing intermediate is reacted with the molybdenum compound to form the molybdenum and sulfur containing composition.

4. The composition of claim 1 wherein the basic nitrogen containing compound is the product made by reacting a carboxylic acid or reactive equivalent thereof with an alkylene polyamine.

5. The composition of claim 1 wherein the basic nitrogen containing compound is a hydrocarbyl amine.

6. The composition of claim 1 wherein the basic nitrogen containing compound comprises a mixture of a hydrocarbyl amine and the product made by reacting a carboxylic acid or reactive equivalent thereof with an alkylene polyamine.

7. The composition of claim 4 wherein the carboxylic acid or reactive equivalent thereof has about 8 to about 34 carbon atoms per molecule.

8. The composition of claim 4 wherein the carboxylic acid or reactive equivalent thereof is a fatty acid.

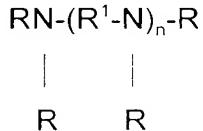

151

9. The composition of claim 4 wherein the carboxylic acid or reactive equivalent thereof is hydrocarbon substituted carboxylic or reactive equivalent thereof made by reacting one or more alpha, beta olefinically unsaturated carboxylic acid reagents containing 2 to about 20 carbon atoms, exclusive of the carboxyl groups, with one or more olefin polymers.

10

10. The composition of claim 4 wherein the alkylene polyamine is a compound represented by the formula

15

having up to about 30 atoms, or two R groups on different nitrogen atoms are joined together to form a R' group, with the proviso that at least one R group is a hydrogen atom, and R' is an alkylene group of about 1 to about 10 carbon atoms.

2()

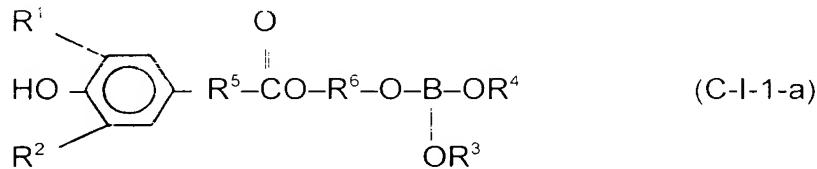

11. The composition of claim 4 wherein the carboxylic acid or reactive equivalent thereof is isostearic acid and the alkylene polyamine comprises alkylene polyamine bottoms.

25

12. The composition of claim 6 wherein the hydrocarbyl amine is oleyl amine and the product made by reacting a carboxylic acid or reactive equivalent thereof with an alkylene polyamine is a polyisobutene substituted succinimide.

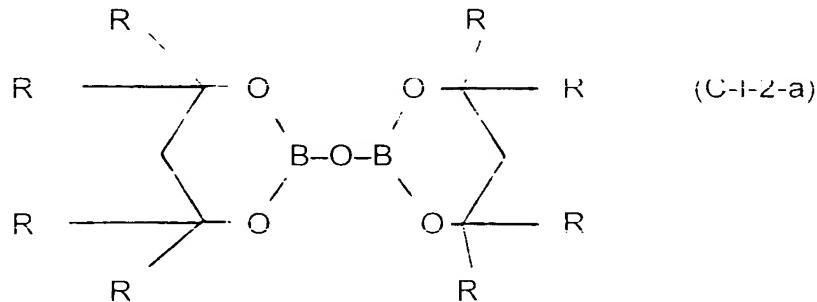

5        13. The composition of claim 1 wherein the molybdenum compound is  $\text{MoO}_3$ .

10        14. The composition of claim 1 wherein the boron containing compound is a borated ester represented by the formula

wherein in formula (C-I-1-a):  $R^1$ ,  $R^2$ ,  $R^3$  and  $R^4$  are independently hydrocarbon groups of 1 to about 12 carbon atoms; and  $R^5$  and  $R^6$  are independently alkylene groups of 1 to about 6 carbon atoms.

20        15. The composition of claim 1 wherein the boron-containing compound is a borated ester represented by the formula:

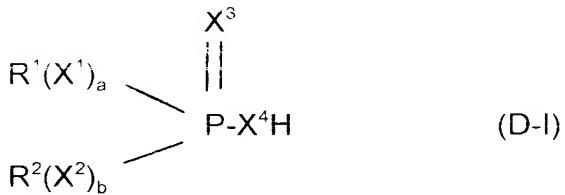

wherein in formula (C-I-2-a), each R is independently hydrogen or a hydrocarbon group.

16. The composition of claim 1 wherein the boron-containing compound

5 is tri-n-butyl borate.

17. The composition of claim 1 wherein the phosphorus containing compound is a metal salt of a compound represented by the formula

15 wherein in formula (D-I):  $X^1$ ,  $X^2$ ,  $X^3$  and  $X^4$  are independently oxygen or sulfur, a and b are independently zero or one, and  $R^1$  and  $R^2$  are independently hydrocarbyl groups.

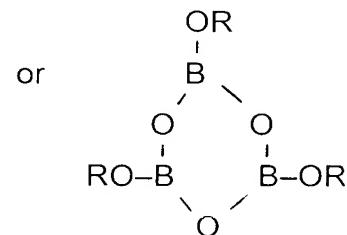

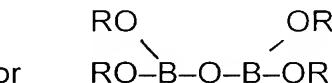

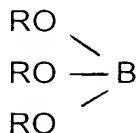

18. The lubricating oil composition of claim 1 wherein the lubricating oil composition further comprises a detergent, dispersant, corrosion-inhibiting agent, oxidation-inhibiting agent, viscosity index modifier, dispersant viscosity index modifier, pour point depressing agent, extreme pressure agent, antiwear agent, friction modifier, anti-foam agent, or mixture of two or more thereof.

25 19 A lubricating oil composition, comprising:

(A) a base oil;

(B) a molybdenum and sulfur containing composition derived from: the product made by reacting a fatty acid with an alkylene polyamine;  $\text{MoO}_3$ ; and carbon disulfide;

(C) a borated ester represented by one or more of the formulae

(C-I-1)

(C-I-2)

(C-I-3)

wherein in formulae (C-I-1), (C-I-2) and (C-I-3), each R is independently a hydrocarbon group and any two adjacent R groups may together form a cyclic group; and

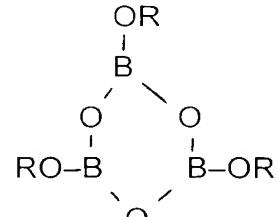

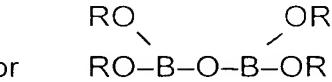

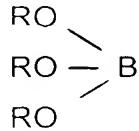

(D) optionally a zinc dialkyl dithiophosphate, provided the phosphorus content of the lubricating oil composition does not exceed about 0.10% by weight.

20. A lubricating oil composition, comprising:

(A) a base oil;

(B) a molybdenum and sulfur containing composition derived from: a polyisobutene substituted succinimide, oleyl amine,  $\text{MoO}_3$ , and carbon disulfide;

(C) a borated ester represented by one or more of the formulae

(C-I-1)

(C-I-2)

(C-I-3)

wherein in formulae (C-I-1), (C-I-2) and (C-I-3), each R is independently a hydrocarbon group and any two adjacent R groups may together form a cyclic group; and

- 5           (D)     optionally a zinc dialkyl dithiophosphate, provided the phosphorus content of the lubricating oil composition does not exceed about 0.10% by weight.
